```javascript
function validateCredentials(email, password) {
  // Define the expected email and password
  const expectedEmail = "yourstudentname@gmail.com";
  const expectedPassword = "yourregistrationnumber@2024";

  // Check if the provided email and password match the expected values
  if (email === expectedEmail && password === expectedPassword) {
    console.log(`User email is ${email}, login successfully!`);
  } else {
    console.log("Incorrect user credentials!");
  }
}

// Example usage:
const providedEmail = "yourstudentname@gmail.com";
const providedPassword = "yourregistrationnumber@2024";

validateCredentials(providedEmail, providedPassword);
```
